How BMW’s “Story of Joy” Advertising Campaign Is Reaching New Consumers

Using Social Media Research to Establish Success Metrics

J.D. Power Intelligence Monitor℠ Best Practices Case Study
In an effort to expand the reach of its brand, BMW launched a new “Story of Joy” advertising campaign in 2010. The “Joy” campaign is not designed to replace BMW’s long-standing and well-known “Ultimate Driving Machine” campaign, which has resonated with BMW’s core car enthusiast loyalists for decades. Rather, “Joy” is intended to appeal to consumers who are not necessarily driving enthusiasts but love to live life. Delivered primarily through traditional and grassroots media, the “Joy” campaign represents a stark departure from the “Ultimate Driving Machine” brand message in an effort to reach new audiences and position BMW for broader appeal.

J.D. Power and Associates conducted some independent research to determine whether the new “Joy” campaign would alienate BMW’s traditional buyers and whether an entrenched “enthusiast” brand could reach a new set of consumers. Furthermore, J.D. Power wanted to highlight how social media research may help marketers understand the true impact of a campaign.

To measure the impact of BMW’s “Joy” campaign, J.D. Power Web Intelligence employed one of its industry-specific social media listening tools, the J.D. Power Auto Intelligence Monitor, to track online consumer commentary associated with the BMW brand before, during, and after the launch of the “Joy” campaign.

**Before, During, and After the Campaign**

Initially, J.D. Power Web Intelligence hypothesized that there would be shifts in how consumers would talk about BMW after the launch of the “Joy” campaign. We were curious whether enthusiasts would question BMW’s marketing direction or if discussions about “performance” would decline. By using the Auto Intelligence Monitor, our analyst team was able to track 13 distinct topics of online consumer conversations that are critical to the automotive industry, including discussions about automotive performance.
Another key component of the Auto Intelligence Monitor is the tool’s ability to evaluate up to two years of historical conversations. Thus, our analysts were able to track conversations about BMW before, during, and after the “Joy” campaign launch.

In analyzing the information, we found only slight shifts in how consumers talked about BMW over time. During the month the “Story of Joy” ad campaign launched, the brand experienced a small lift in marketing and communications discussion. However, that lift was temporary, falling back to 3% of BMW-related conversations in the month following the launch.

J.D. Power’s Auto Intelligence Monitor provides analyses of two years of historical social media conversation, which allow clients to clearly measure impact and define success.

**It Might Not Be What Is Being Said, but Who Is Saying It**

Because the Auto Intelligence Monitor provides the ability to track both what is being said and who is saying it, the tool led our analysts to consider a different possibility. While the data showed that discussion topics surrounding the BMW brand had not changed, what if the consumers discussing the topics had changed?
“Joy” Appeals to Women and Gen Y

Within 60 days of the initial “Joy” campaign launch, our analysts noted that conversations about the brand by females increased by 20%, signaling a definite demographic shift. The campaign also seemed to pique the interests of a younger audience. In particular, members of Generation Y\(^1\) talked positively about the message; BMW’s use of grassroots media to broadcast the message; and other activities in which the brand was involved, such as charity work.

J.D. Power Offers Unique Solutions to Measure Success

If BMW’s goal was to target younger, female consumers, J.D. Power data shows the strategy to be working. But BMW marketers wouldn’t have been able to track whether the campaign was working if they had employed a traditional social media monitoring tool. The ability of the Auto Intelligence Monitor to determine what is being said and who is saying it allowed our analysts to conduct a longitudinal analysis of the “Joy” campaign, identifying trends indicating that BMW is, in fact, reaching a new set of consumers with the “Story of Joy” advertising campaign.
